Customer Reviews

Not very happy with the product. I have had to make a lot of supplemental flash cards, because the set is not very thorough. Additionally, I found at least one card with incorrect information. The Biology

& Biochemistry "Mixed Inhibition" card states that these inhibitors bind to active sites of enzymes. This is false! They bind to allosteric sites. After finding this card, I am concerned about the accuracy of the rest of the deck...

To make these cards viable for studying, you need to write in more details. The definitions lack detail. Some definitions are so vague that I wouldn't even call it a definitions. You can write on these fairly easily. I added a lot of information to mine.

really easy to study with the princeton review books. Hope I do well on the Mcat.

These are an excellent study aid!

Great studying material.
